Reflective Essay

I chose this topic because technology is steadily becoming more advanced, especially in school systems. The best way to deal with this change is to stay up-to-date with it. Asking educators for tips on what work best for them and finding mediums on your own that could work for you and your classroom can give you much needed incite. Technology has been created to assist in classroom management, teaching, and probably more. Because these programs have been made to make tasks easier and more accessible, why not utilize them?

There is a lot that has been implemented since I attended lower education schools and I feel future educators should get a headstart on this topic. As future educators, we will have to adapt to using these mediums so why not start finding tools that could possibly work for us in the future, now? There is a lot educators must learn in order to do their position and it is not all taught in school. As with anything you are passionate about, you must do research. I hope that future educators find this helpful.

My infographic was created to target elementary educators. The infographic I created displays websites that can be used and what they can be used for. There are multiple reasons for why my intended audience is elementary educators, but the main reason being the material found on these websites are targeted at lower level students.

These websites contain games and practice test to reinforce lessons taught in the classroom. These websites can be used in the classroom as well as at home for more practice. There are plenty of other websites that can be used besides these sites but these were just a few mentioned in the interview I conducted for my research.
