ORCID is a registry of unique identifiers for researchers and scholars that is open, non-proprietary, transparent, mobile, and community-based. ORCID provides a persistent digital identifier that distinguishes you from every other contributor and supports automated linkages among all your professional activities.

How can I ensure I receive credit and recognition for all of my contributions? Shouldn’t there be a way to reduce time spent on tracking my accomplishments? How can I maintain control over my own record of contributions?

Regardless of your discipline or place of work, it is critical to your reputation and career that research and scholarly organizations and funders, publishers, scholarly societies and associations, and your fellow researchers and academicians be able to quickly and unambiguously identify and attribute your work — and only your work — to you. ORCID helps you easily and reliably link your unique identity with your contributions such as datasets, articles, books, media stories, samples, experiments, patents, and notebooks.

ORCID recognizes that you own your record of contributions. You can maintain all of your key information in one place, and you control your own privacy settings, including what information is displayed publicly, what is shared only with trusted partners, and who those trusted partners are.

ORCID is founded on interoperability with multiple systems and institutions. ORCID allows you to link with other identifier systems, including those maintained by funders and publishers, and exchange data freely with those research information systems.
