The NICE Framework emphasizes operating and maintaining IT systems and security. This area is one that I would like to focus on throughout my Cybersecurity career. I chose this one area to show that I would like to learn the technical aspect of the field and what I can do right there to help the client solve a problem. Another one that I want to bring attention to is the investigative frame. Digital forensics is a career that I could see myself doing in the future because I took an interest in criminology after that course, and this came up in the class. The Framework area that would appeal to me the least would be Oversee and Govern because I can't see myself anytime soon learning all that much to be able to tell others what strategy to use; now, if I learn enough and can do that in the future that would be great but as of now I want to be taught.
