Question: Explain how your memes relate to Human-centered cybersecurity

In the first picture I picked it is a dog with glasses on an Ipad. It is funny because it is human centered but in the photo it is a dog doing human-like things. My meme is a parallel life to ours. In this other life there are dogs living like we do. Where the dogs that live there do all human-like things, such as going to work, shopping and using the internet like we do. We share the same internet, meaning we see their activity as well as they see ours. This meme relates to human-centered cybersecurity frameworks because it shows us that other species like dogs can impose on our internet spaces. This can cause certain breaches and attacks that can put us in dangerous situations. There should be measures in place to keep the human race safe. It is about us being the first priority and sharing an internet space with dogs is not safe for us because we never know what they are up to.

The second picture I choose is the girl smiling on her phone while sitting on the sidewalk. As she appears to be overly excited, she seems to be reading a phishing scam that offers her \$500. It appears to be no risk, which is why she is excited. She will soon realize all of her information will be compromised. She also needs to carefully read emails. In helping those read their emails thoroughly, she and others need to be taught how to tell the difference between phishing websites and the real thing. This way they have the knowledge to protect themselves from getting scammed in any way.

The third picture I picked is the group of people in the meeting. This meme is a work meeting about training to be better at protecting the company, but everyone in the meeting is going different things. One girl is on her phone, someone is doing something on their computer, while the others are staring off into space. Participation and understanding should increase when training material is being taught. The employees need to take note of how people use technology.

Training workshops need to become easier to help employees; they need to be in simple layouts.

That's how it will become easier and effective. Furthermore, it allows employees to retain the information given to them to properly protect their companies.
