

HW 1.1 Syllabus Reflection

1. I think that a lot of the assignments names look familiar to Thermodynamics ideas and we are going to be using our prior knowledge to build off that and apply for this course
2. Constant Hall 2134
3. Brayton Cycle as I am not familiar with what it is
4. What makes me confident in this course is that I am able to pick up on things pretty well and figure something out if I don't. What makes me hesitant is that I didn't like the way my thermodynamics professor taught so I feel like my knowledge in that class could be better than what is is.
5. The homework is worth 10 points of each test, then the rubric is another 10 and the last 80 points come from the procedure of the problem.
6. You are provided one make-up test except the last test you cannot make this one up.
7. Reflection statement and e-portfolios
