Journal Entry 10

After reading the Science Direct article on social cybersecurity it focuses on key impacts in today's age and how human factors affect the cyber world. I believe that social media is very impactful on today's generation when it comes to cybersecurity. Us as humans are the ones that created technology and have continuously used it for positive impacts like useful systems or safeguarding but then there's several negative impacts like cyberbullying, cybercrimes, AI, etc. Throughout the article, they provide several negative impacts and survey research to prove these statistics. Then they continue with techniques for detection in social cybersecurity which I believe is so valuable to those who aren't as educated on cybersecurity. These methods provide insightful information to give the needed awareness and education for these issues.
