

End of Term Reflection

Amy Mbacke

Bachelor of Science in Biology

Biology 302

November 25, 2025

One of the most important things I learned in this class was how immune cells communicate and coordinate using cytokines and antigen presentation. This helped me make clear connections to my microbiology coursework, especially when understanding how pathogens evade immune defenses or trigger inflammation. It also tied directly into concepts from cell biology by showing how signaling pathways lead to real physiological responses. Learning these connections made immunology feel highly relevant to my interests in microbiology and medical biology. Overall, this class helped me grow as a student by strengthening my ability to integrate information across courses instead of viewing each subject in isolation.
