

## Journal Entry #7

I created these memes to highlight that humans are the weakest link in cybersecurity defense. Human error is one of the biggest causes of cybersecurity breaches due to people clicking on links, giving out data, and getting hacked.

The human-centered cybersecurity model puts humans at the center of cybersecurity and information security in an effort to reduce human-caused errors. My memes were created to showcase that humanity isn't as intelligent when it comes to cybersecurity defense, which leads to various cyber breaches and cyber crimes.

The human-centered cybersecurity model raises awareness for cybersecurity, which should hopefully mitigate the problems my memes represent.
