Journal Entry #10

Alexander Turnsek
3/27/2024

This entire article discusses social cybersecurity, and the author mentions the importance of caution regarding the concept. Social cybersecurity is easily described as humans using technology against one another. Social cybersecurity doesn't affect just one or two people; it affects everyone. Social cybersecurity revolutionized international conflict as it allows nations to "attack" without a physical presence. This will enable nations to spread misinformation, leak sensitive data, and even shut down major systems with how our world is currently set up. I must agree with the author of the article; they mention that we should take a more unified approach to social cybersecurity
