

“When the coffee is worth the risks of using public Wi-Fi”

Public Wi-Fi is notorious for often being unsecure, leading to hackers being able to more easily gather information and data from other users on the same network due to the lack of security measures.

“When Karen falls for yet another phishing scam so now everyone has to do CSA training again”

People are commonly referred to as the biggest risks when it comes to cybersecurity which is why cybersecurity awareness programs are incredibly important so that people can get education about the common cybersecurity risks and common scamming tactics used by cybercriminals.

“Hackers when your password is Password”

It is unfortunately rather common for people to use incredibly weak passwords to make things “easier” which then opens them up to being more easily hacked by malicious attackers.
