Makinde, H.M. et al. Folic acid supplementation and malaria susceptibility and severity among people taking antifolate antimalarial drugs in endemic areas. Malar. J. 19, 47(2020). https://doi.org/10.1002/14651858.CD014217

The article "Folic acid supplementation and malaria susceptibility and severity among people taking antifolate antimalarial drugs in endemic area" is a primary source because it presents original research conducted by the authors. The study investugates the effects of folic acid supplementation on malaria susceptibility and severuty in individuals taking antifolate antimalarial drugs, detailing the methodology, participant selection and data collection. The result are based on original data, including statistical analyses, and the authors interpret their findings in the context of existing literature, offering new insights into malaria treatment. Since the article reports new experimental findings rather than summarizing or reviewing previous studies, it qualifies as a primary source in the field of malaria research.
