Personal Statement

What am I going to do with the rest of my life? This is a question that everyone asks at some point in their lives, generally when they are in their late adolescent years. This is a question I'm asking myself today as a senior at Old Dominion University. I've come up with a rough plan for my future after a lot of thought. I recognize that some of these plans and objectives may alter over time, but with a strategy in place, the trip can begin. I've completed really tough college curricula, such as Honors and hard classes, to prepare myself for the adventure. These programs have not only helped me gain college entrance, but they have also helped me build excellent study abilities and time management skills. My ultimate aim while attending college is to become a doctor, either an OBGYN or a plastic surgeon. I intend to major in Biology at Old Dominion University for my undergraduate degree. Following that, I plan on pursuing medical school at the University of Florida. I'd like to start a medical practice somewhere in central Florida after finishing a residency in my speciality. Having a family is very essential to me when I finish my schooling. It is my ambition to get married and start a family. My long-term strategy has always included my family. I have a lot of personal aspirations as an adult. Most significantly, I want to be a homeowner. In addition, having a laboratory would allow me to pursue my scientific interests. Political science is another particular passion that has evolved while in college. I discovered a passion for politics and debate, and one day I hope to join a campaign team or maybe run for governor of my home state of Florida. Although this journey at Odu is coming to an end, I'm thankful for my time here. The trials and tribulations have molded me into the person I am

today. I hope to take these lessons to Medical school and throughout life to make me a better person.
