Week 1 Journal Entry - Review the NICE Workforce Framework. Are there certain areas that you would want to focus your career on? Explain which areas would appeal the most to you and which would appeal the least.

After reviewing the NICE Workforce Framework, I realize that every area in it is vitally important in the workforce. The focus for my career is Threat Analysis and Systems Administration areas in the framework. Threat Analysis would be interesting to me because it helps identify threats from cybersecurity criminals and foreign adversaries in support of law enforcement or counterintelligence operations. I can serve my country again in a very important role that protects our nation. Another area I would be interested in would be Systems Administration. It was an interesting job, but I would like to get more into the process that the Systems Administration has with creating a system, maintaining it by operational and security control implementation. The least specialty area that I would be interested in would have to be Software Development. It is an area that seems daunting, I do not find interest in developing software.
