**Week 7 Journal Entry** - Review the following ten photos through a human-centered cybersecurity framework. Create a meme for your favorite three, explaining what is going on in the individual's or individuals' mind(s).

Explain how your memes relate to Human-centered cybersecurity.

I created some memes about human-centered cybersecurity to highlight the fact that while humans can make mistakes, we can also learn from them through training. Having worked in the industry, I have come to realize that continuous learning is crucial. It's not fair to solely blame humans for any security breaches that may occur, especially if they haven't been trained on cybersecurity policies and practices. To address this issue, regular cyber awareness training should be provided to keep up with the constantly evolving cyber landscape. I like moving to human-centered cybersecurity because it gives a sense of humility and acceptance that nobody is perfect, and we can always improve.
