<div align="center">Reflection Paper 3</div>

As previously mentioned, my last fifty hours of my externship that I discussed in reflection paper two mentioned my work with the fundamentals of Generative AI. Throughout the last fifty hours, I have been growing more knowledge on the topic and have been working on more Generative AI tasks. I have been working more with PyTorch and it is definitely a lot more interesting than I thought it would be. Overall, as my externship is coming to a close I am so glad I got to have this experience and am lucky enough to have a mock interview with Cognizant to potentially acquire a job with them.

While I have been learning about cybersecurity for several years now, there have been many different aspects to my externship that allowed for me to grow and learn as a coder. I have had another internship before with *National Journal,* back in high school however, it had nothing to do with cybersecurity and I definitely have enjoyed every single experience that I have gone through to get to this point.
