

After carefully reviewing the NICE Workforce Framework, I have come to a conclusion regarding interesting sections. These sections include Investigation (IN), Cyberspace Intelligence (CI) and Oversight and Governance (OG). These three fields are equally interesting to me but if I had to choose one, I would choose Oversight and Governance (OG). I am particularly interested in Space Program initiatives. I am hoping to focus on a career path at companies like Northrop Grumman, NASA or Space X. On the opposite end of the spectrum, the field that is the least appealing is Cyberspace Effects (CE). I am just not too interested in the projection side of the Cybersecurity field as I am more interested in the concrete data side of the role.
