

- Digital Forensics | Davin Teo | TEDxHongKongSalon – [YouTube](#) Watch this video and think about how the career of digital forensics investigators relate to the social sciences. Write a journal entry describing what you think about the speaker's pathway to his career.

Note: Submit the file [in Word, text or pdf format] or Upload your journal entry into your ePortfolio and submit the link in the assignment.

I found that this video outlined the speaker's journey to his career to be very interesting. The concept of digital forensics is the study of data in the realm of the law field where the format and usage content can indeed vary on the case at hand, The fact that he mentions how there was no true class to learn all of the different aspects of knowledge that a person comes in contact with while learning themselves. The concept at hand utilized that he needed to use the world around him as he had to learn a multitude of different lessons to prepare for his career as a Digital Forensics Investigator (DFI). For instance, the use of deepfake images comes into relevance through the fact that the individual needs to analyze if the image is real or a deepfake superimposed image utilized for an intended purpose. Another concept at hand is the usage of Metadata. With the metadata purpose, the content of the image or data source places a filename and timestamp on the image for future analysis relevance. The image can then be utilized and described for this purpose. This purpose can vary over different parameters in the future for the goal of digital forensics.
