

Journal #14

Name: Colton Wilson

Date : 7/28/2024

In his article, Andriy Slynchuk outlines eleven activities that many internet users might not realize are illegal. These activities range from using unofficial streaming and torrent services to sharing copyrighted images and personal information of others without consent. Cyberbullying, recording VoIP calls without permission, and faking one's identity online are also highlighted as illegal practices. Additionally, Slynchuk discusses the implications of using others' internet networks without permission, collecting data on children under 13, extracting audio from YouTube, and conducting illegal searches online.

Slynchuk's insights emphasize the importance of being aware of these illegal activities to avoid unintended legal consequences. He advocates for internet users to adopt better security practices, such as using strong passwords, browsing in incognito mode, and employing a VPN for enhanced privacy. The article serves as a reminder that despite the perceived anonymity of the internet, laws still apply, and being informed is crucial for safe and legal online behavior.
