

Journal #11

Name: Colton Wilson

Date: 07/14/2024

The article on social cybersecurity highlights the growing importance of understanding and addressing cyber-mediated changes in human behavior and societal outcomes. It emphasizes the strategic use of information warfare by state and nonstate actors to manipulate social, cultural, and political landscapes. This form of warfare targets the human element, leveraging technology to influence beliefs and disrupt social cohesion. The discussion underscores the multidisciplinary nature of social cybersecurity, blending political science, sociology, and technology to safeguard national security in an era where information can be weaponized. The article calls for a robust understanding and proactive measures to counter these threats.
