

## ODU CYSE 270 – Linux Systems for Cybersecurity

Chadwick Bennett

### Lab 9 – Task Automation

This lab automated tasks for programs to run consistently based on connections to IP addresses or websites. It also ran code to avoid duplications, ensure tasks were working properly, and avoiding too many copies of back-ups.

The challenges were learning the commands to automate tasks, to learn how Linux reads time and direct it to read time. Additional skills were to run to make and delete bak-ups.
