

### Reflective paper 3

During the last 50 hours of research on the COVA program, my team “Team Moss” worked with Dr. Moss to generate an assessment report about her company’s cybersecurity. We also had a conversation with Mr. Greg to discuss the Top 10 checkpoints in the Q&A class. He gave us valuable feedback on the assessment report. Meanwhile, my team worked on the presentation and the Clinic Term Paper. My team lead, Faith, assigned tasks to each member of Team Moss. Each of us is responsible for the assigned tasks. Teamwork is the dream work; we properly completed the assessment and the clinic term paper. I believe those are perfect. I also found that I still needed to improve my writing skills and leadership skills. I really appreciate your support and my team’s support, so I have time to work on my professional certificate. After my hard work, I finally passed the CISSP exam. It is a big step in the cybersecurity field. To be honest, I am so proud of my achievements so far.

Currently, I also searched for the job market, and I found that it is not easy to enter the cybersecurity field as a newly graduated student. Most of the job descriptions need at least 2-3 years of work experience. I have applied for some positions but there is no response yet. I believe I will have more chances after this internship in the job market.
