

The area that I want to focus on in my career in cybersecurity would be Protection and Defense. I want to focus on this area specifically as in my future, I want to be able to help people with my job in cybersecurity. The job in “PD” like “Incident Response” and “Threat Analysis” can help me with that goal. The areas that appeal to me the most from the list would be “IN”, and “PD” are the areas that interest me the most from the list. I feel this way as each of the frameworks and their jobs allow me to complete my goal of helping others. I also find the jobs in each of the frameworks interesting and unique. The areas that appeal to me the least are “DD”, and “IO”. I feel this way since I like roles where I can help rather than create.
