

Meme 1: In this meme, a man is frustrated that his company is making him use a different password for his company account. This meme relates to Human-centered cybersecurity as it shows that people want to take the easy route when it comes to passwords and increase the risk of being targeted by cybercriminals. By not using different passwords for different accounts, people are putting their and company information at risk.

Meme 2: This meme deals with Human-centered cybersecurity as it relates to the fact that Peer Networks can influence people to engage in cyber offences like cyber bullying. As said in the module, "those with peers who engage in cyber offending are more likely to engage in cyber

offending themselves.” The dog in the meme can be imagined to be a person who sees their peers committing cyber bullying and is thinking of joining in.

Meme 3: This meme relates to Human-centered cybersecurity as family can play an important role in cybersecurity in both a personal and business way. As said in the module, “Families often share digital technology devices (e.g., computers, laptops, etc.). Their behavior on those devices can impact others in the family.” As shown in the meme, having a sibling or a parent download a fake game or app on another family member’s phone or computer can impact the safety of any files or sensitive information that is saved on the devices.
