

The Article Review

Article 1.pdf

The topic of this article is why or how should online gambling affect everyone.

Online gambling is increasing every day and for Gamers to win money this requires you to put your credit card and your personal information. That information is not always safe, hackers use gambling sites as a playground.

People often put their credit card information in to receive money back these are considered easy targets for hackers. This will cost you in the long run if not protected, hackers use ads to collect data. Also, hackers learn social behavior to capture their victims. They often use popular phrases to get their victims' attention. This is how the topic relates to many of the principles of social sciences, for example, gambling addiction has increased because it is now super easy to access gambling activities online. This article states that online gambling is not good for people with addiction problems.

Also, the government wants to put regulations and taxes on these online gambling sites because of the amount of money being made. As online activities get popular the more cyber crimes this is why the government wants restrictions.

The topic of this article was referenced in class in many ways and one topic is trust, hackers learn a certain group's behavior to relate to them to gain their trust. These hackers sometimes get to know the person then they will still their data or just steal their money. Hackers often pretend to be people then say they need help or are in a bad space in life and need money. They then use your information to get more money out of you.

Technologies such as phones, tablets, and computers are used for these online games and hold a lot of data. If that data is intercepted by a hacker they can now get any information and use it however they want. Playing these gambling games online on any of these devices makes you an easy target. Don't be an easy target by putting your information on these dangerous sites. Be careful of the science and advertisements you use and watch because they could be viruses to collect your data.
