

## **Journal entry #11**

### **Cyber security analyst job**

This video of the cyber security analysts talked about what cyber security analysts do, and what the job entails. The person speaking in the video broke down What kind of things a person working a cyber security job would like with their salary would be like or what kind of shifts they would be working. From the video, it seems like Cybersecurity Allen's job. I have a lot of collaboration and teamwork if they work in person as opposed to a remote job. They also need to have social engineering awareness, which basically means being aware of various social engineering techniques that are used by attackers to manipulate individuals into revealing sensitive information. He.
