JOURNAL #10
CYSE 201S

Ennio Cruz

ARTICLE SUMMARY

The article discusses the emerging threat of information warfare to national security and how technology can now be used to destabilize countries and societies. It stresses that adopting "Social cybersecurity" measures is important to combat propaganda and fake narratives aimed to weaken our nationalism, sow distrust with the government and divide us in morals and beliefs. Social cybersecurity involves using the same technology to unite our citizens behind shared American values and restoring trust in the government, military and economy.
