DAVIN TEO

CAREER PATH?

Davin Teo's TED talk about digital forensics is very interesting, particularly his personal story of how you landed in the field of digital forensics.

He was originally an accounting professional and had a small accounting firm when he decided to learn about IT because a company he was working with needed their network to be connected. It was through there that he discovered his interest was in IT, and because of his background in both accounting and IT an opportunity came for him to join Australia's first digital forensics team.

His story is a testament that IT and cybersecurity are truly interdisciplinary fields. People from different fields, like Davin from accounting, can offer valuable skill sets and perspectives. He also mentioned that careers in digital forensics have no straight career path and you just find yourself in it as you continue to learn. This is also true with cybersecurity. As you continue to learn the more opportunities and jobs will become available.
