PrivacyRights.org provides information about data breaches such as:

01 Type of Data Breach:
Card Fraud, Hacking, Physical Breach, Insider Breach,
etc.

02 Types of Organizations breached:
Schools, Health Facilities, Government, Financial
Institutions, etc.

And organizes this information by state and chronological date.

Researches can use these publicly available information regarding data breaches to better understand and address the issues by doing the following:

01 Answer research questions such as:
What is the most common breach? Who and what does it affect most? How long has a particular breach been affecting individuals and organizations?

02 Formulate solutions such as:
Drafting legislation for information security and privacy for both state and federal governments.

03 Analyze the effectiveness of governance:
Comparing data breaches between states with varying information security and privacy laws.
