

Fifty Hours part 3 Easton Jarboe

In my time at Brooks Crossing lab they helped me grow as a person. In my last stretch of hours I got to work on two more field trips. The rest of the time I got to spend learning more about the machines and helping to promote Brooks Crossing. I am extremely grateful for the work I got to do. It was really fun flexing my creative muscles in order to promote the iLab and open makerspace at Brooks Crossing. I think by far my favorite was making things with the 3D printers. I made a shark and a lobster that can articulate. This can be somewhat of a challenge because I have to make sure the model was set up right so it would not misprint.

The lobster had a hard time printing originally so I had to place supports around in the settings and here is the final result. The other thing I made for promotion at the iLab was a canvas bag and pencils case. This came out really well and my friends even wanted me to make some so I did some original artwork for the bag and it was a bit of a challenge finding the perfect image size for the bag but it turned out

very well. I am super grateful I go to work with so many amazing people and learn so many new things.
