Reflective Essay 2

After the second meeting that was done between us as a group we have now been able to answer every question that was needed for us to be able to begin to start the actual process of this innovation. We have gotten 3-5 answers which were very important for us to figure these questions out. How we knew that this was a problem that needed to be solved is because young children are targeted with social engineering. As we talk about the human aspect this is the weakest link in the chain of cybersecurity which ultimately makes the most sense. We all were already aware of cybersecurity so well because of our majors and we knew that even without research children are the weakest link.

The reason why is just because they are just not educated enough as they should be about something like this. They always fall into the trap and will continue unless we make a change to this as we have decided to take part in. For the fourth question about barriers we knew there would be multiple barriers that we would have to overcome. School bureaucracy not allocating funding for our cybersecurity resources is a huge one. Another one we decided on was the lessons and metrail staying current as threats are constantly changing. Lastly the other one we had come up with at the moment was creating a game that is both fun and educational which is very important.

To know if this would be successful we came up with when other schools adopt the curriculum which would make sense. Another idea we had was to perform a group study on several schools to measure learning outcomes. After answering all of these questions we were prepared to write our proposal and do more research into the innovation. After the proposal was graded we saw that there were some changes that needed to be made to make it more effective and an innovation that was really possible to work.
