

Reflection Essay

I have learned a lot from this class. The most interesting thing was definitely learning about asynchronous fission in the zebrafish. This connected me to the real world by basically realizing how research can change over the years. Since finding out about the synthetic fission, now researchers are seeing if humans could have this too. Maybe we could use this form of new cell division to benefit us in some way of growing back cells we may have lost rapidly.

Overall, I really enjoyed this class, the professor made it very fun and enjoyable and I am thankful for that!
