### Reflective Journal 5

ODU and the classes I have taken have prepared me in a few different ways for this job and the responsibilities I have to do. The first thing is time management, time management is a very vital element of my job since there's a lot of work by yourself stuff. The job is one of the best ways to work if you do not like to talk to people but if you suffer from a lack of time management skills then this job would not be for you. I personally like the task of sticking on track and striving to go faster and faster without sacrificing the quality of work. Another way that ODU has helped me is by allowing me to pursue my interests after showing me that there are many different jobs in information technology.
