

HW Reflection

No matter what course you take there is a reason why students are expected to do homework. It is for practice, the cliché quote “practice makes perfect” is very true. Its very true for this class, the material in this class is so dense that in order to be efficient and hopefully good at fluids is to keep practicing problems. Eventually after enough practice you become quicker solving problems and stop making little mistakes here and there. Homework is expected in any engineering course and it is for this reason. If we want to get good at anything, we have to practice. For example the only way to get good at a sport is to keep playing it. In correlation for this class, the only way to get good at fluids is if you practice it, by doing homework.
