

CYBERSECURITY ENGINEER

Fernando Quinola

CYSE 270 - LINUX SYSTEM FOR CYBERSECURITY

This course will teach an individual the basics of installation, configuration, and file systems management. This job requires understanding of Linux operating system.

CYSE 516 - CYBER DEFENSE FUNDAMENTALS

This course will prepare an individual to deal with analyzing, building, and attacking modern security systems. This course would show that the individual knows the basic understanding of information protection and assurance.

CYSE 450 - ETHICAL HACKING AND PENETRATION TESTING

This course will teach how to operate industry-leading tools and introduce basic terminologies used in ethical hacking. This course would help because the job requires a CEH certificate.
