Journal Entry 11

Working as a cybersecurity analyst has a major relationship with social behaviors. Per the video an entry level cybersecurity analyst will be monitoring the network, doing incident response, and things of that nature. Doing such tasks require behavioral skills like trust and understanding social engineering. Throughout the video, the presenter goes through different details of the cyber security analyst career, such as location, salary, and advice on how to start. These categories all share a relation to certain social themes, like what city you would fit in the best, the cost of living vs salary, and so on. The presenter then begins delving into how to get experience starting out, and mentions helping non-profit organizations or churches to start out, and mainly making connections in the community that will help you grow your career.
