

Journal Entry #1: Watch this video about a 12-year-old cyber security expert. Pay attention to how he has embedded himself into the cybersecurity culture. Also, pay attention to how the ideas of knowledge, technology, and secrecy relate to his expertise. Write a journal entry about your thoughts related to the video.

Honestly the intelligence the kid possesses shows that he has a fantastic passion for what he is attempting to dive into. He shows his talents to the world, doing conferences and presentations around the world. He puts his foot in the cybersecurity field at such a young age, getting that extra experience before most people will after high school. He knows how vulnerable bluetooth is and how we use it everywhere we go, showing his capabilities to be able to get login information off the wifi connection. It's interesting that someone that young can have such a passion for something like cybersecurity shows that at any age you can find something to believe and pursue in life.

Journal Entry #2: Journal entry 2. Watch this video and relate it to class lectures about subcultures.

It's very different from the typical music video from a culture like this. The lyrics prove they know what they are doing when it comes to cybercrime. The terminology they use is very realistic. It shows they have a team of which they do these scams with as you can see there is a group of people behind them. Fraud subculture is visible as they know about freezing a account even saying they "rob banks without the guns" which means some type of cyber skills. Speaking of the fact they sam gift cards frequently saying that they get cards already with money on them. You can see them having at least 10 credit cards in their hand, showing the validation once more. When we talked about how people can be put into subcultures to accurately study the behaviors, this is an exact definition being able to analyze the video and realize what theft is doing.
