### Week 8 Journal Entry

I think that media can have a negative effect on the view of cybersecurity. For example, movies can have the effect of taking something that exists and making it seem more exaggerated than it really is. Furthermore, a social media post, movie scene, or news articles about a cyber hacking can often not be entirely accurate due to how hacking tends to take a long time. I think that media can affect widespread awareness among people about new cyberthreats due to social media marketing. Attacks can be reviewed in news articles to let the public know of a vulnerability their systems may have and how to prevent it. This can impact cybersecurity as people can become more digitally secure and can make it harder for hackers to hack the public.
