Jade Hines   Week 1

Prompt: Review the NICE Workforce Framework. Are there certain areas that you would want to focus your career on? Explain which areas would appeal the most to you and which would appeal the least.

Workforce Framework for Cybersecurity (NICE Framework) | NICCS (cisa.gov)

Entry:

       I think I would like to focus my career on the protection and defense section of the NICE framework as well as the securely provision under the idea of Risk Management. This is because I enjoy the idea of finding the holes in a system and way to protect against them, and planning for if an attack does happen. I believe that this would be appealing due to the idea of Cyber Defense Analyst best describes what I want to do in cybersecurity. This is because I believe it aligns with protection with computer skills and planning skills. Another path I wish to look at is Risk Management as this would include planning and learning about more ways to plan for future problems more interesting. It includes the understanding of how cyber activities work but would be more social in working. This would also be a way to connect the multiple branches of cybersecurity which also interests me. I feel like the least appealing would be under the collect and operate as it would be making whole new tools for cybersecurity and strategies while what I wish to do is use the tools that are already given in the field. I just think developing new tools would be time consuming in managing the current cyber trends and data.
