

Reflection Paper 3

After 150 hours of work at General Electric, I'm astonished by how much I've developed professionally and emotionally. I feel more ready than ever to pursue a career in cybersecurity after spending the last 150 hours doing something that has been both tremendously tough and incredibly satisfying.

The value of cooperation and teamwork in cybersecurity is among the most important lessons I've learned during my internship. A cybersecurity expert must collaborate well with coworkers from all departments and backgrounds. I have acquired these skills through my work at the organization, including listening to other viewpoints, effectively communicating with people, and collaborating to create solutions to challenging security problems.

I also learned practical technical skills during my internship, including vulnerability scanning, network mapping, and security auditing. I am thankful for the chance to have acquired these skills through my employment at the organization since I know they will help me in my future career in cybersecurity.

And last, my internship has helped me develop personally. I've grown more devoted to pursuing a career in cybersecurity, more self-assured in my skills, and more methodical in my work. I've learned how to create objectives and goals, efficiently manage my time, and maintain concentration in the face of difficulties.
