CIA Triad

 While reading this article I was overwhelmed trying to understand the CIA Triad, but after reading it more I did some research and I was able to get a better understanding. They focus on protecting information an it is built on three main principles. One of their principles is confidentially to me: it's about keeping a secret where only certain people can gain access and learn about the knowledge. Availability is another principle, you are able to get the information anytime you want to but only when you need it. Finally, Authorization is being able to decide who can use the information or who can gain access to it depending on their standing or their need for the information to complete their task. When it comes to authorization you are able to get certain information but there are always areas where you will need higher authority to access further information. It is interesting to see how this are applied in the real world with jobs and even back accounts, because with your bank account you can see the necessary items like checking and balances but there are higher ups who can see little information like estimated amount you deposit every 2 weeks and your withdrawal rate.
