/home/johnny-gomezreyes  
(johnny-gomezreyes@kali)-[~]  
└─$
```

**echo** is a command in Linux used to print/repeat the input it is given. Which in turn redirects to a file or displays it on the terminal.

**date** is used to set the system current date and time or display.

**ls** is used to list the contents of the directory.

**pwd** is used to tell your specific location in the file system.
