Cellular Biology

Reflection

The semester has come to an end and I find myself really enjoying the content of this course. In particular, I found the unit on gene expression to be very interesting. The process by which genetic information in the DNA is transcribed and then translated in order to make the proteins that are essential for life is very interesting. The reason this process is interesting to me is because it helped me in my genetics class. Overall, this semester I really enjoyed learning about the processes and features that are in every cell.
