

1. How would you locate an access point (despite the limitations of the radar window)? I would probably use a software that could find access points such as Access Point Finder.

2. There is a value of -44 dBm for signal strength. How good is this?

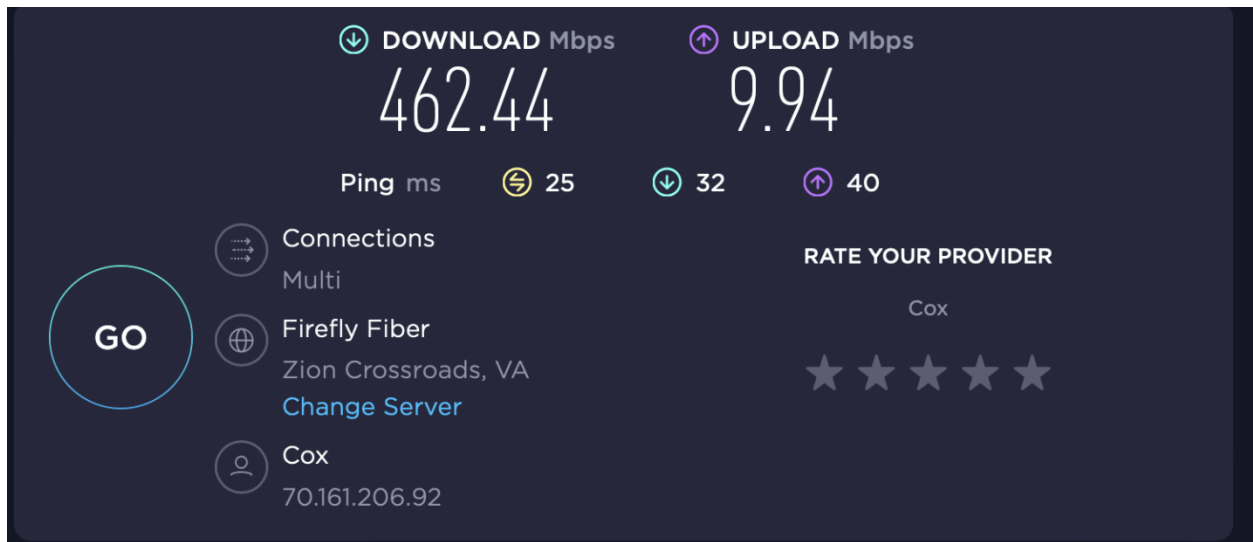

With the connection of -44 dBm, the signal strength would be excellent. The range for excellent connection will be is -50 dBm or lower.

3. What information does the Connection Test give you? (Attach screenshot)

For this connection test, I used <https://www.speedcheck.org>. It displayed the latency, download speed, download stability, upload speed, etc.

4. What information does the Speed Test give you? (Attach screenshot from speedtest.net)

The information that the Speed Test from speedtest.net displays my download and upload speeds. It also displays the area that I'm in and the IP address of my router.

5. What information does the Quality Test give you? (Attach screenshot from SpeedTest desktop for Windows or MacOS, download link at pingtest.net)
