

Journal Entry 1

When it comes to my career in cybersecurity I would like to focus more on Protection, defense, and investigation. Responding to threats and stopping them from happening is the first thing that comes to mind when I think of cybersecurity. Assessing threats and vulnerabilities to help secure the networks put in place. Investigating any threats that may come and figuring out why and how it happened, has always been how I envisioned cybersecurity and I plan on pursuing that path. An area that appeals the least to me is design and development. I'm not against the idea of building systems and networks but out of all the options in cybersecurity that interest me the least.
