

Socket Programming Project

(Types of Social Engineering)

Kerby Guillaume CYSE 250

Project Idea

My idea for this project is to construct programming codes that will help users understand more about the type of social engineering attacks that threats use to gain access to sensitive information. My project should:

- Users create accounts / log in
 - Connect to a secure server
 - Request lessons on social engineering attacks
 - Receive encrypted educational content
 - Take interactive quizzes
 - Server tracks progress
-
