

# Patient with Nicotine Use Disorders

## Chapter 32 Wilkins

Tobacco use is the most \_\_\_\_\_ cause of disease.

Three different types of tobacco uses include: \_\_\_\_\_,  
\_\_\_\_\_, and \_\_\_\_\_.

More than \_\_\_\_\_ chemicals in tobacco products and smoke found to be unsafe.

Tolerance results in \_\_\_\_\_.

Nicotine is metabolized in the \_\_\_\_\_.

Pulmonary systemic effects of using nicotine include \_\_\_\_\_,  
\_\_\_\_\_, \_\_\_\_\_.

Secondhand smoking in children can cause \_\_\_\_\_ and  
\_\_\_\_\_.

Three examples of an oral manifestation of tobacco use include  
\_\_\_\_\_, \_\_\_\_\_, and \_\_\_\_\_.

Name one oral manifestation you have seen in clinic (could be anything abnormal, does not have to be one from the chart):  
\_\_\_\_\_

Tobacco use decreases \_\_\_\_\_ and increases chance of  
\_\_\_\_\_.

Withdrawal refers to

---

---

What is an extraoral sign you should look for when examining the patient's breath?

---

What should be the #1 priority for the patient? \_\_\_\_\_
