## **1. What are the connections between the disciplines addressing entrepreneurship at ODU?**

The leading connection between the disciplines regarding entrepreneurship at ODU involves the application of skills that have been cultivated by the academic environment. As example, the use of time management in my major is very important and thus I have grown a very high time management skill. Therefore, the use of this skill is also applied to my entrepreneurship career as a part of that. Tying in the knowledge that I have gained academically as well applying the academic skills to other sources of life.

## **2. Is entrepreneurship an art or science?**

Entrepreneurships is both an art and a science based on the process that is being addressed. Though if only one option could be picked to cover entrepreneurship as a whole then it would lean in science's favor. This is due to the data that can be collected from aspects of a business and then further applied to benefit the company at hand. Data processing being a backbone of any business model and thus leaning towards a science gain.

## **3. How is failure good?**

Failure in itself is not good, though good things may be found in failure. From failure flaws can be found and patched to help prevent further failures from occurring. As well as further skills that aided in the failure can be focused on to then overcome failures from arising once again. Failure is not good, though learning from failures is beneficial.

## **4. What have I learned from failing?**

I have learned my limits from my failures as well as skills that need to be further developed. Through my failures I am able to learn the limits that I have on myself being either physical or mental limits. As well as if a certain skill is what left me to fail, I am able to pinpoint that skill and then work on building it to a suitable level. Whenever a failure is to occur it is crucial that knowledge is obtained from the failure.

## **5. What ethical issues might arise related to what I am working on?**

An ethical issue that I can see arising in the field I plan to go into revolves around risk management. This is because within cybersecurity in relation to business there is a level of risk that businesses will take in order to stay within a budget. Though this budget could then open up the company, clients, and workers to cyber risks. Therefore the concept of risk management would be the first ethical issues to arise from my understanding.
