

Hw 11

HW 1.1

1.43

Force Required $F_c = 18000 \text{ lb}$

Cylinder diameter = 2.50 in

$$\text{Cylinder Area} = \pi (1.25 \text{ in})^2 = 1.5625\pi \text{ in}^2$$

$$\text{Pressure} = \text{Force} / \text{Area} = 18000 \text{ lb} / 1.5625\pi \text{ in}^2 = 3666.929 \text{ PSI}$$

3667 PSI

1.58

Pressure Change Required to decrease a Volume of
Mercury by 1.00 % in PSI & MPa

Change in Volume $\Delta V/V = 1\%$ or $\frac{\Delta V}{V} = 0.01$

Bulk modulus of Mercury is: $E = 3.54 \times 10^6 \text{ PSI}$

or 24750 MPa

$$E = \frac{\Delta P}{\Delta V/V} \Rightarrow$$

$$\frac{\Delta V}{V} = 0.01$$

$$3540000 = \frac{\Delta P}{0.01} \Rightarrow \Delta P = 3540000 \cdot 0.01$$

$$24750 \text{ MPa} = \frac{\Delta P}{1.01} \Rightarrow \Delta P = 24750 \text{ MPa} \cdot 0.01$$

The pressure change would have to increase
be $3.54 \times 10^4 \text{ PSI}$ or 247.5 MPa to
decrease the volume of the mercury by 1.0%

1-63

Stress F_c to deform, measured in lb/in

actual inside diameter = 0.50 in

actual length = 42 in Bulk mod

filled w/ machine oil $\Rightarrow$ machine oil $E = 189,000 \text{ PSI}$

$$F = 884 \text{ lbs}$$

$$F = \Delta P / (0.4\%)$$

$$189,000 \text{ PSI} = \Delta P / (1/42)$$

$$4500 = \Delta P \rightarrow$$

$$P = F/A$$

$$F = 4500 \text{ PSI} \cdot (\pi (0.25)^2)$$

F is low?

I guess that's a small load to h.

$$\Delta L = 1 \text{ inch}$$

$$\Delta L/L = 1/42$$

1.76 hamburger $\rightarrow$ 1 lbm US Appendix K

$$\text{mass in Slugs} \rightarrow 32.174 \text{ lbm / Slug} \rightarrow \frac{1}{32.174} \text{ Slug} = \underline{.031 \text{ Slug}}$$

$$\text{mass in kg} \rightarrow 2.205 \text{ lbm / kg} \rightarrow \frac{1}{2.205} \text{ kg} = \underline{.454 \text{ kg}}$$

$$\text{Weight in N} \rightarrow 4.448 \text{ N / lbf} = 1 \text{ lbf on earth} = \underline{4.448 \text{ N}}$$

1.92

Cylinder

2.25 N @ Open or empty

35.4 N @ 200mm full

Specific Weight: What?

$$\gamma = w/V$$

$$w = (35.4 \text{ N} - 2.25 \text{ N}) = 33.2 \text{ N}$$

$$V = \pi r^2 \cdot h = \pi (0.075 \text{ m})^2 \cdot 0.2 \text{ m}$$

$$\gamma = \frac{33.2 \text{ N}}{\pi \cdot (0.00125 \text{ m}^3)}$$

$$= \underline{9393.7 \text{ N/m}^3}$$

1.107

Alcohol specific gravity

$$SG_A = .79$$

find density in Slugs/ft³ & g/cm³

$$SG_A = \rho_A / \rho_{H_2O} = 1.94 \text{ Slugs / ft}^3 = \rho_A / 1000 \text{ kg / m}^3$$

$$\rho_A = (1.94 \text{ Slugs / ft}^3) (.79) = \underline{1.53 \text{ Slugs / ft}^3}$$

$$\rho_A = (1000 \text{ kg / m}^3) \left(\frac{1000 \text{ g}}{1 \text{ kg}} \right) \left(\frac{1 \text{ m}^3}{1000000 \text{ cm}^3} \right) (.79) = \underline{79 \text{ g/cm}^3}$$

App K: $515.4 \text{ kg/m}^3 = 1.53 \text{ slug / ft}^3$ } Conversion
 1000 $(.79 \text{ g/cm}^3) = 1.53 \text{ slug / ft}^3$ } check w/
 table K

2.17 4 types of Non-Newtonian Fluids

Time independent { Pseudoplastics $\rightarrow$ latex, inks, Syrup, molasses
 Dilatant fluids $\rightarrow$ Starch in water (like for kids gel block)
 Bingham fluids $\rightarrow$ Paint, Chocolate, mayo, asphalt
 Time dependent fluids $\rightarrow$ Some Jelly, grease, Pizza dough (hard)

2-18

Viscosity of water @ 40 °C using Appendix D

is: $\eta \approx 6.5 \times 10^{-4} \frac{\text{N}\cdot\text{s}}{\text{m}^2}$

2-27 Same Setup for Hydrogen @ 40 °F $\approx 4.4^\circ\text{C}$
 Not today

is $\eta = 1 \times 10^{-5} \frac{\text{N}\cdot\text{s}}{\text{m}^2}$

40 °F $\Rightarrow (40 - 32) / 1.8 = 4.4^\circ\text{C}$

2-35

Same Setup SAE 30 oil @ 210 °F

is $\eta = 1 \times 10^{-2} \frac{\text{N}\cdot\text{s}}{\text{m}^2}$

210 °F $\Rightarrow (210 - 32) / 1.8 = 99^\circ\text{C}$

2-61

Steel ball 1.6 mm diameter $S_g = 94$

Sphere Volume: $V = \frac{4}{3} \pi r^3$

$V = \frac{4}{3} \pi (.8 \text{ mm})^3 = 2.145 \text{ mm}^3$

Steel density: 77 kN/m³ $\rightarrow$ Ball falls 250 mm in 10.4 s Find viscosity of oil.

$2.145 \text{ mm}^3 = 2.145 \times 10^{-9} \text{ m}^3$

$(77 \text{ kN/m}^3) \cdot (2.145 \times 10^{-9} \text{ m}^3)$

Steel weight = $1.65 \times 10^{-7} \text{ kN}$

Used to study for
