

Miles Brandon

The Human Factor in Cyber Security

HOW TO ALLOCATE LIMITED FUNDS

As a Chief Information Security Officer it is important that you develop a security plan or strategy to protect your company's data. I would choose to allocate my funds as evenly as possible. Both training employees and upgrading security tools are important to having a strong security team. Training employees to better navigate security threats and company policy. Keeping security tools like firewalls, anti virus software, and threat detection up to date is crucial for protecting an organization. In conclusion, splitting funds 50/50 is the best way to allocate my resources.
