

## HW 1.1 Syllabus Reflection

Nathan Chernys

The assignments that look manageable are the homework assignments, because of the familiarity of doing textbook problems that correspond with what is being learned in class. While it would be manageable it will surely not be easy because of the unfamiliar format of the homework. In the end, it will take adjustment to do the homework comfortably in the format outlined. On Tuesdays and Thursdays, the class meets in Constant Hall on ODU campus in room 2134. The eportfolio assignment seems challenging purely because it is an assignment that is new and unfamiliar. However, I am confident in my skills to adapt and quickly understand what I need to do to grasp the concepts of the class and content. The test is graded based on Purpose describing the steps in the answers, accurately drawn diagrams, the sources used such as equations and their origins to give credit where it is due. It is also graded on the data and variables included, the applicable understanding of what is happening, the procedure, the calculations, materials, an analysis and a summary. In essence the answers given for grading must have everything used explained and credited where it was due and a thorough and clear process that is legible. If a test is missed, there is a single make up test allowed in the week before finals. While it is allowed it is not recommended to miss a test for any reason as it will have to be made up in a busy time of the semester. It is possible to get extra points by creating an eportfolio, or by doing a test reflection.
